

# DDN @ SambaXP 2020

---

Sven Oehme – Chief Research Officer

[oehmes@ddn.com](mailto:oehmes@ddn.com)

my history with Samba 😊

1998 - worked on AFS and leveraged Samba for SMB exports to windows

2000 - contracted Volker to fully support Samba on AIX on top of AFS

2001 - started working on GPFS

2005 - convinced Volker and Tridge that you can cluster SMB 😊

2006 - the first commit of CTDB landed

2007 – launch of Service Offering - SOFS

2010 – launch of Scale Out NAS - SONAS

2016 – DDN Media Scaler 2.0

2019 - added scale out SMB Support to EXAScaler

Who is DDN ?

# DDN is the World's Largest Privately held Storage Company

At Scale | Enterprise

# At Scale Storage & Data Management

DDN's mission is to change the way data moves and is managed for the AI-powered era to bring simplicity and hyper efficiency to our customers.

No more slow applications and inefficient Flash implementations. No more inhibitors to scale. No more failed AI projects with immature and unproven Software and Hardware.

- >1000 Employees
- >10,000 Customers
- 10 Technology Centers
- 150+ Patents

Our Customers

## AI and Analytics Solutions

- Security at the scale you need to accelerate cancer research and personalized medicine
- The world's largest autonomous car solutions
- Fast, in-place analysis of all your financial data
- Low latency systems designed for real time image processing

**yahoo!**

# NVIDIA SuperPOD

**Optimized for DGX, Installed and record-breaking in ½ day**

40 AI400X Appliances (15 PB ALL NVME, 1.6TB/sec)

First 10 appliances deployed onsite in 4 hours

Filesystem delivered > 400GB/s read throughput out of the box

Fastest production system on IO500 10 node challenge at SC19

# US Autonomous Driving

## HyperScale R&D made practical with EXAScaler

Hyperscale Autonomous Driving solution across the US with EXAScaler

Performance at Web Scale – over 1.6TB/s Aggregate Performance.

Cost Effective approach to very large capacities and flat namespace performance for each Region.

DDN provided complete at scale management environment for provisioning and monitoring.

# European Autonomous Driving

## Modular and Scalable AI Storage for Leading Vehicle Manufacturer

Multiple Installations, each of

200 GB/s throughput

27 PB net per EXA5 filesystem

DDN Insight Scalable Monitoring Solution allows fine grained visibility into user and workload as well as system performance and health

# DDN @ Scale Products

# COMPREHENSIVE DATA PLATFORMS FOR SCALE

**All-Flash Cache**

Acceleration for all workflows, file systems and applications

**File Storage**

Fast parallel file storage for every workload and data type

**Block Storage**

Fastest time to insight with limitless scaling and best efficiency

**AI Storage**

Turnkey acceleration for artificial intelligence and deep learning

**DataFlow**

**Data Management**

Synchronize, Backup, Archive at any Scale

## The Intelligent, Optimized Environment for AI and HPC

- Deep Optimizations for both AI and HPC delivers for the highest efficiencies and the right capabilities
- *Your data in the right place at the right time*

# DDN Enterprise Products

# IntelliFlash Portfolio

## N Series

NVMe All-Flash Arrays  
200  $\mu$ sec latency

## HD Series

High-Density All-Flash Arrays  
< 1ms latency

## T Series

Hybrid SAS Flash Arrays  
1ms – 2ms latency

---

ONE Operating Environment | ONE Feature Set | ONE User Experience

- IntelliFlash brings unified all-flash and hybrid appliances for high performance enterprise workloads
  - Unified access for block, file and object
  - Performance – high IOPs and low latency
  - S3 cloud migration for backup and DR
  - Cloud-based storage analytics
- Target workloads
  - Mission critical applications demanding performance
  - OLTP, OLAP and databases
  - Enterprise AI and Analytics

# ddn N-Series Advantages

60% Savings

2.5x Data Reduction

~300us latency/response time

4X Faster

>800K IOPs per system

## Space Savings Summary

# Tintri VMstore

Simplicity – Single Datastore for all VMs -  
Mgmt & Desktops

VAAI & VCAI Offloading (Full Clones)

Improve Deployment speeds for Citrix  
and VMware View

Automation - PowerShell Toolkit & REST  
API support

Tintri Global Center – Per-VM Analytics  
& Mgmt at Scale

Latency Visualization  
(Host/Network/Storage + Mirror)

QoS

Dynamic QoS (Noisy Neighbor  
Isolation)

Per-VM Granularity (Logical Live Size –  
i.e. PVS write cache)

Long-term Trending & Modeling (Tintri  
Analytics)

Mix and Match Workloads (VDI,  
Infrastructure, Server Apps, etc.)

Two challenges

# Challenges for the community

- Samba is lacking behind on some key workloads e.g. single threaded seq read/write
  - High Speed collect of sensory data
  - DNA sequencer
  - Autonomous vehicle
- Target single file writes at ~2-3 GB/sec from a windows 10 client to a distributed storage system, today we see 100's of MB/sec

## Challenges for the community

What would it take to build an optimized SMB Server for a KV Storage Backend ?

- assume super fast low latency (10's of usec) KV Client library in userspace

- Highly resilience and scalable to quadrillions of keys and 100's of PB in size

- Completely elastic and resilient backend with zero end-user touch

What would an ideal interface for SMB to KV Store look like ?

**Thank You**
